

If condition questions

1. Check Positive, Negative, or Zero

Input: 5

Output: Positive number

Explanation: If number $> 0 \rightarrow$ positive, $< 0 \rightarrow$ negative, else zero.

2. Check Even or Odd

Input: 7

Output: Odd number

Explanation: If $\text{num} \% 2 == 0$, it's even; otherwise odd.

3. Check Divisible by 5

Input: 25

Output: Divisible by 5

Explanation: If $\text{num} \% 5 == 0$, number is divisible by 5.

4. Find Greater of Two Numbers

Input: 10 20

Output: 20 is greater

Explanation: Compare two numbers using if-else.

5. Check Leap Year

Input: 2024

Output: Leap year

Explanation: Leap year if divisible by 4 and not by 100, or divisible by 400.

6. Vowel or Consonant

Input: a

Output: Vowel

Explanation: Check if character is a, e, i, o, u (upper/lowercase).

7. Alphabet, Digit, or Special Character

Input: 9

Output: Digit

Explanation: Use ASCII values to classify the character.

8. Multiple of 3 and 7

Input: 21

Output: Multiple of both 3 and 7

Explanation: Condition: `num % 3 == 0 && num % 7 == 0`.

9. Voting Eligibility

Input: 18

Output: Eligible to vote

Explanation: $\text{Age} \geq 18 \rightarrow \text{eligible}$.

10. Check 3-Digit Number

Input: 345

Output: Three-digit number

Explanation: Number between 100 and 999.

11. Largest of Three Numbers

Input: 10 25 15

Output: 25 is largest

Explanation: Compare all three using `if-else if`.

12. Grade Calculation

Input: 82

Output: Grade B

Explanation: $\text{Marks} \geq 75 \text{ and } < 90 \rightarrow \text{Grade B}$.

13. Uppercase or Lowercase

Input: G

Output: Uppercase letter

Explanation: ASCII range A–Z → uppercase.

14. Divisible by 11

Input: 121

Output: Divisible by 11

Explanation: If $\text{num} \% 11 == 0$.

15. Valid Triangle (Angles)

Input: 60 60 60

Output: Valid triangle

Explanation: Sum of angles must be 180° .

16. Type of Triangle

Input: 5 5 5

Output: Equilateral triangle

Explanation: All sides equal → equilateral.

17. Number Within Range

Input: 15 (range 10–20)

Output: Number is within range

Explanation: Check using logical AND.

18. Electricity Bill

Input: 120 units

Output: Bill amount = Rs. 600

Explanation: Charges calculated using slab rates with if-else.

19. Digit Using ASCII

Input: 7

Output: Digit

Explanation: ASCII of 0–9 → digit.

20. Smallest Using Ternary Operator

Input: 8 3

Output: 3 is smallest

Explanation: Uses condition ? value1 : value2.

21. Simple Calculator (Switch)

Input: 5 + 3

Output: Result = 8

Explanation: Operator decides operation using switch.

22. Day of Week

Input: 3

Output: Wednesday

Explanation: Each number mapped to a day using switch.

23. Days in a Month

Input: 2

Output: 28 or 29 days

Explanation: February has 28 or 29 days.

24. Vowel Using Switch

Input: E

Output: Vowel

Explanation: Multiple cases (a, e, i, o, u) in switch.

25. Menu-Driven Program

Input:

1
10 20

Output: Sum = 30

Explanation: User selects option; `switch` executes the choice.
